Blueprint -

Wireframe - First thing that is built in a website

Design - Mocks- Figma

HTML - Structure built

CSS - Styling of the website

JS - Functionality of website

URL- Uniform Resource Locator

2 things

Someone needs to tell me that this is the thing to open when this url is hit

This is the thing

1 Laptop - 10 people are connecting with 8gb ram

16gb - 20 people
128 gb

10 laptop 16gb - 200

AWS, GCP, Azure

I can take computer on rent from the above services
And put my website on these computers

IP address I would connect to these with the IP

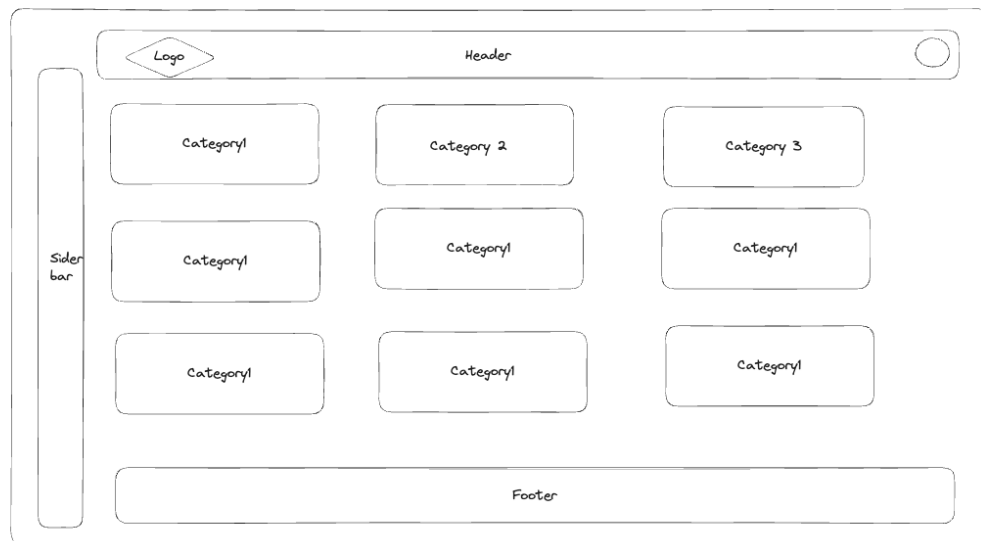

You are able to connect to some remote machines using web

IP address	Names
192.1.2.1	www.google.com
192.1.2.0	facebook
192.1.2.3	apple
192.1.2.4	scaler

DNS- Domain name server

Seo-
Tags
Meta
HEadings
Page speed
How many users

The score based on all the above parameters is going give you a SEO score

IP - address

IP - address

Address given to uniquely identify anyone connected to web

google

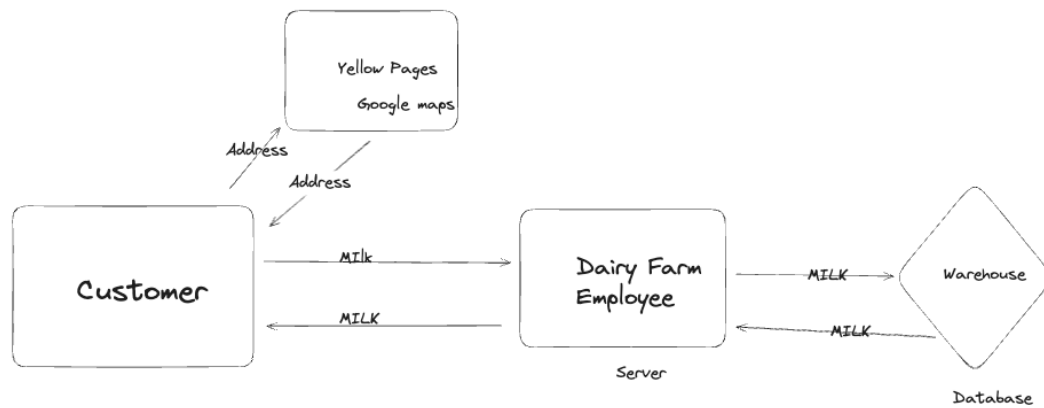

8.8.8.8

IP address

Names

192.1.2.1
192.1.2.0
192.1.2.3
192.1.2.4

www.google.com
facebook
apple
scaler

Server

Server is a machine that accepts a request and responds to a request by getting the data from the database whenever necessary

HTML - hyper text markup language

Semantic
